

HEARING PROTECTIVE DEVICES

INTRODUCTION

This site provides information about various types of personal hearing protectors which have been evaluated by DoD laboratories. The Noise Reduction Rating (NRR) and frequency specific attenuation as determined by a DoD testing facility is provided for each product as well as a phone number for the manufacturer. Only DoD tested products or any of the listed hearing protective devices (HPDs) may be purchased for and utilized by Navy personnel. While standard stock HPDs are far less expensive than open-purchased products, they are not necessarily the most protective, nor the easiest to purchase. Commands desiring to open purchase these authorized hearing protectors are advised to follow these procedures:

- Establish that no adequate standard stock protector is available in the required time frame
- Purchase any of the authorized products in small quantities, initially,
- Field test them for comfort, durability, protectiveness, and user acceptance, and
- Spend your dollars accordingly.

Activities desiring to use hearing protective devices not specified here shall submit a sample of the device with a request for evaluation to Chief, Bureau of Medicine and Surgery. BUMED will review manufacturers' test data and determine suitability for use within the Navy's Hearing Conservation Program. Approval is unlikely until the product has been tested by a DoD laboratory.

For further guidance and information on this subject the POC is Mr. Ned Kramp at (757) 462-5579 or DSN 253-5579. E-mail address is krampn@nehc.med.navy.mil

HEARING PROTECTIVE DEVICE ADVISORY

When ordering "foam" type insert earplugs be advised that the NSN 65615-00-137-6345 will not get you the EAR or Deci-Damp plug. EAR no longer has the contract to provide expandable foam earplugs. What you will get is an earplug called Sound Guard by New Dynamic. This plug is harder, expands slower, and works loose easily and customer satisfaction has been very low up to this time. The only other option is to buy the EAR plug outside the stock system at a considerably higher cost. For those of you using the Sound Guard, acceptance and user compliance is very important. Please, let us know if they are not acceptable. Below is listed a new entry into the hearing protective device stock system. A plug designed for combat troops.

COMBAT ARMS EARPLUG

Plug, ear/Aearo Co(317-692-6666)
Plug, ear/Edgewater Corp(412-828-4000)
NSN 6515-01-466-2710
Unit pkg Qty 2
Unit cost \$5.00

This plug is designed to protect the hearing of soldiers and marines in dismounted operations from impulse noise. They are passive nonlinear devices that work without batteries and are easy to maintain and are compatible with most head gear. At this time only one size is available to fit most of the adult male population.

CUSTOM MOLDED

Custom molded hearing protective devices are used in special cases only. NRR values will vary from individual to individual. These devices will only be available from activities which have an audiologist on staff.
